Subject: RE: Q2 2016 NDNQI Graphs

Great job Jen!!

My only suggestion would be to flip the bar and line graphic display. Have NDNQI be the line graph data presentation and our data as the bars. This is how it usually appears with benchmarked data. The benchmark as the line to show where the benchmark rate falls in comparison to our data. It's a quick one click fix. If you need me to show you how to do it let me know. Can't recall if I have already shown you how to do that. You are becoming a graph pro!! 😊
